FABRICATED STEP TREADS

Fabricating Stair Treads, Nosings, Skirtings and Drainage Channels for Integrated Tile Solutions

Our bespoke fabrication services enable clients to think beyond standard porcelain tile installations. We create customised tiles designs and unique products to suit clients' exacting specifications and projects.

Using industrial saws and waterjet cutting technology we precision cut, mitre, groove, edge and shape even the hardest porcelain tiles and slabs (from 6mm up to 20mm); fabricating high quality stair treads to complement all types of interior or exterior tiling schemes.

Our fabrication processes enable us to create a wide variety of stair treads, edges, nosings, risers and slip resistant finishes for every type of application. We also create porcelain pool edges and drainage channel covers for that complete luxurious, seamless surface aesthetic.

Examples of standard tile sizes used in our fabrication processes:

300x300, 400x400, 500x500, 600x300, 600x600, 600x900 & 600x1200 – Other sizes on request.

Examples of standard tile thicknesses used in the fabrication process:

6-20mm – Other sizes on request.

The Edges and Nosings

Our skilled team fabricate stair treads with a selection of nosings and edges;

1. Round Edge (RE)

Note: The colour of the fabricated round edge will depend on the base colour of the porcelain tile rather than the finished surface on it.

2. Mitred Tread with 40mm Facing Edge (ME40)

Note: Standard Facing Edge depth is 40mm. Other sizes are available on request.

3. Mitred Gradone Tread with 40mm Facing Edge (GRAD40)

Note: Mitred edge stair treads are micro-bevelled to prevent potential damage and chipping during use.

Fabricated Porcelain Pool Edges and Drainage Channels

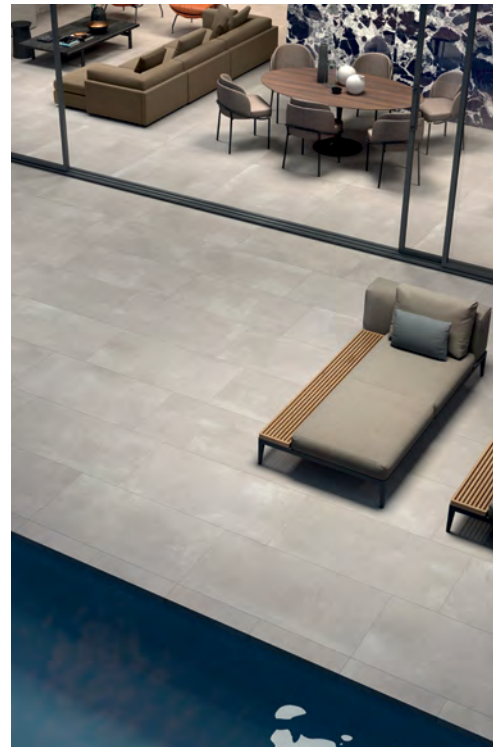

1. Porcelain Pool Edge

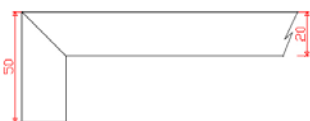

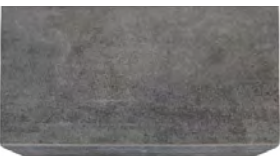

2. Drainage Channel

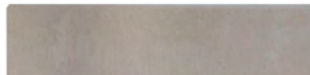

3. Drainage Corners

Outdoor 20mm Porcelain Paver Options (PTV+36W)

Skirting

Note: Full range of fabricated options on request

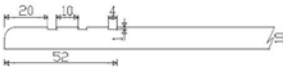

Stair Tread Anti-Slip Safety Strip Options

Our fabricated tile products and surfaces are designed to meet your specific performance requirements. From the earliest design stage we will advise on material properties, slip resistance, strength and durability, to ensure the best fabricated solution for your individual project needs.

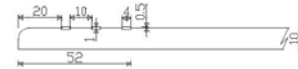

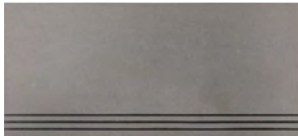

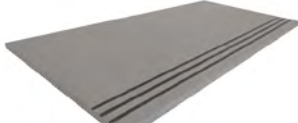

Stair treads can be fabricated with a variety of additional anti-slip grooves and inserts (resin or metal options) to suit individual design and tiling schemes.

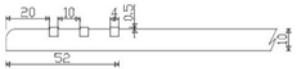

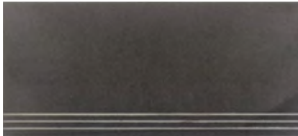

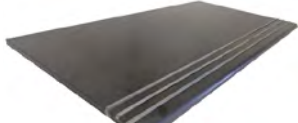

3 Anti-Slip Grooves (3G)

3 Anti-Slip Resin Inserts (3GR)

3 Anti-Slip Metal Inserts (3GM)

50mm Anti Slip Resin Strip (50GR)

Note: All dimensions are subject to tolerance

Note: Alternative anti-slip combinations are available on request

Stair Tread Fabrication Options

Each stair tread and skirting option is fabricated to specification, on a project by project basis. You can select the option to best suit your individual design scheme.
